# ReadSoft Invoice Portal

E-invoicing has been a global trend for the past decade. It solves the too-much-paper syndrome and eliminates manual tasks, lowering invoice processing costs for both suppliers and buyers. ReadSoft Invoice Portal is a cost-effective e-invoicing solution that dramatically simplifies processing by connecting you to hundreds of thousands of companies that are already connected and exchanging e-invoices. ExFlow provides plug-n-play integration to ReadSoft Invoice Portal.

ReadSoft Invoice Portal enables suppliers and buyers to exchange invoices online. The solution automatically converts invoices to the format required by buyers, transfers them to the correct receiver in the correct way and eliminates manual work and errors. Whether you're a supplier or a buyer, Invoice Portal delivers or reads the format you prefer and will save you time and money with robust onboarding, EDI validation and support for all major e-invoice formats.

Save Time with Self-Service Inquiries

The solution facilitates streamlined communication between buyers and suppliers and ensures that both parties have access to real-time updates and information on invoice status.

"Have you received my invoice? When can we expect to be paid? What is the status of my invoice?" Research estimates that AP staff spends up to 30% of their time dealing with basic supplier inquiries. With a self-service web portal, suppliers can view their own transactional details without needing to engage AP for questions, saving time and allowing staff to focus on high-value tasks.

E-Invoicing Adoption, the Cost-Effective Way

Transitioning to e-invoicing doesn't have to be expensive and time-consuming. Invoice Portal is a cloud-based service that is fast and easy to implement with a low total cost of ownership. It even comes with an intuitive built-in on-boarding tool to connect all your suppliers to e-invoicing.

ReadSoft Invoice Portal is seamlessly integrated with ExFlow, enabling organizations to increase the level of automation in their AP process.

FEATURES	BENEFITS
